

Backer Rod

Nulon's closed cell PE Foam is ideal for water tightness features in construction. Backer rod is pushed into joint gaps to form a uniform and firm base in horizontal and vertical joints. Nulon's backer rod is available with or without a hollow, depending on your application.

It is perfect for:

- Joints between precast concrete panels;
- Saw cut joints in concrete floors;
- Peripheral joints around aluminium and timber windows;
- Around penetrations through walls and floors;
- Expansion joints between bricks and masonry.
